# Camera App

Where you want to place your Camera App on your iPhone Screen depends on how many pictures you plan to take. I suggest you place it where it can easily be found.

My preference is to place it on the Menu Bar at the bottom of the screen. Being there it will always be available no matter what screen you are on.

How you move the camera app to place it where you want will depend on what version of iPhone you have.

Even if your iPhone is locked, you still have access to your camera without unlocking your phone. Just press the camera app and you will be ready to shoot.
